

## Sensors/Strata®

**For use in most retail environments, the Strata family of products delivers the power of new RF wide aisle technology in several aesthetically appealing packages.**

**R**etailers have more options than ever with Strata®, the new wide aisle product family from Checkpoint Systems. Using high-performance DSP® based technology and newly developed Advanced Digital Discrimination Radio Frequency® (ADD/RF) technology, the Strata product line offers retailers a range of design options to meet their aesthetic needs.

Apparel stores, department stores, drug stores, mass merchandisers, sporting goods stores, hardware stores – all can benefit from Strata's design flexibility. Providing superior detection and maximum alarm integrity, this transceiver system provides six foot detection between sensors and three feet of detection on either side of the sensor. If used with Checkpoint's hard tags, even wider aisles can be protected.

As do all Checkpoint RF sensors, Strata wide aisle systems work with the complete range of Checkpoint's reusable and disposable RF tags and labels, including RF labels that are source tagged. When combined with Checkpoint's non-contact deactivation technology, Strata gives retailers a technologically superior EAS solution to achieve their shrinkage reduction and profit improvement goals.

## Sensors/Strata®

Strata PX

Combining aesthetic appeal with wide aisle coverage, Strata sensors are the most technologically advanced EAS systems available today.

**M**aximum detection and exceptional tag discrimination characterize the performance of Checkpoint's Strata wide aisle product line. Offering three design options, Strata sensors blend with a store's decor and offer positioning flexibility within the store environment. The Strata PX is a high-impact plastic detection sensor used for general purpose applications. For retailers with a broader range of aesthetic needs, the Strata GX, using glass for aesthetic appeal, and the Strata MX, incorporating a metal tube design look, complete the offering.

### Specifications:

**Height:** 65.5" (167 cm)

**Width:** 21" (53 cm)

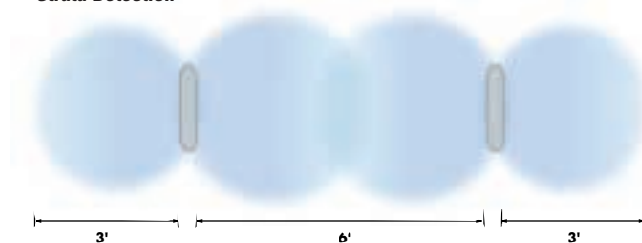

**Weight:** 24 lbs. (11 kg)

**Materials:** High-impact  
ABS thermoplastic

**Power:** 110/220 VAC,  
50-60 Hz

**Color:** White and grey

### Strata Detection

**Checkpoint®**
